

## Crop: Radish

### Package of Practices

<b>Soil</b>	Well drained fertile medium loam or sandy loam soils are best suited for crop growth. Avoid water logging soils.
<b>Climate</b>	Optimum temperature range for good germination is 25 to 30* C.
<b>Season</b>	As per the regional practices and timings.
<b>Seed</b>	400 to 600 gm per acre
<b>Spacing</b>	30 cm x 10 cm
<b>Manures &amp; Fertilizers</b>	8 to 10 tons of FYM per acre has to be incorporated into the soil before sowing. Green manuring crops before the main crop is also desirable. First Dose 8-10 DAS: 25:25:30 NPK kg per acre. Second Dose 20-25 DAT: 20:20:30 NPK kg per acre. Boron & Calcium Nitrate should be sprayed at 20 to 25 DAS.
<b>Irrigation</b>	Irrigation is very critical during the growth and development of the plant but absolutely critical during the root development stage.

Disclaimer: The results of above mentioned agronomy practices may vary depending upon the weather, soil type, other biotic and abiotic stresses.
